

About the Reference Numbers

Reference numbers shown throughout the charts in this catalogue are part numbers which may be more familiar to customers in various regions of Canada. These are included for the convenience of our new customers who have recently switched from a competitor's product line to USP.

The reference numbers in this catalogue are for general application comparison only and should not be used as a substitution tool. The user is responsible to compare specific load values, fastener schedules, material specifications, and other factors to determine suitability of use for any particular product.
